5: Insurance Claim Command Center — Page Elements Use Case

EXP 5B

Aim:

To design and build a single internal Command Center Page in Zoho Creator for the existing "Insurance Claim Request" application, demonstrating the use of Page Builder elements such as Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer.

Problem Statement:

The claims processing team normally checks claim status through the default report. A unified Command Center is required to provide a quick visual view of settlement progress, claim-type distribution, claim searching, processing status, detailed claim records, quick actions, and reference information from one workspace.

Scope of the Use Case:

- Application Name: Insurance Claim Request & Processing Management
- Page Name: Claims_Command_Center_Page
- Primary Users: Claims Processing Team, Surveyors, Branch Manager
- Underlying Form/Report: Claim_Request_Form, Claim_Request_Report, ClaimType_Distribution_Chart
- Objective: Provide a single internal workspace for monitoring, searching, processing, and reviewing claims.

Page Elements Used:

Element	Element Name	Purpose
Panel	Command_Center_Main_Panel	Main structural container for the dashboard.
Board	Claim_Status_Board	Kanban-style claim processing stages.
Chart	ClaimType_Distribution_Chart_Widget	Visualizes claim counts by claim type.
Gauge	Monthly_Settlement_Target_Gauge	Shows progress toward the monthly settlement target.
Search	Claim_Search_Bar	Searches for specific claim records.
Form	Quick_Counter_Claim_Intake_Form	Provides direct claim intake from the page.
Report	Full_Claims_Report	Displays detailed row-level claim data.
Snippets	Claim_Process_Guidelines_Snippet	Provides reusable process/reference information.
Button	Send_Document_Reminder_Button	Provides a quick reminder action.
Widgets	Surveyor_And_Reserve_Widgets	Provides operational information.
Viewer	Claim_Document_Viewer	Displays supporting claim documents inline.

Detailed Page Layout and Configuration

Section 1 — Overview Strip

The top area contains the Monthly Settlement Target Gauge, ClaimType Distribution Chart, and Claim Search Bar for immediate monitoring and searching.

Section 2 — Processing Workspace

The processing area contains the Send Document Reminder Button and the Claim Status Board. The Board is intended to represent Submitted, Under Investigation, Approved, Settled, and Rejected stages.

Section 3 — Detailed Data

The Full Claims Report provides detailed row-level claim information for review and management.

Section 4 — Reference & Quick Actions

The sidebar is intended to contain the Claim Process Guidelines Snippet, Claim Document Viewer, and Quick Counter Claim Intake Form.

Section 5 — Operations Strip

The bottom section is intended for Surveyor Availability and Reserve Fund Widgets.

Configuration & Workflow:

- The Panel acts as the outer structural container.
- The Board is grouped using the Status field and is intended for visual claim-stage management.
- The Chart displays the distribution of claim types using live sample data.
- The Gauge displays the settlement amount/progress against the configured target range.
- The Search element is placed above the main processing area for quick record lookup.
- The Button provides a one-click document reminder action.
- The Report provides detailed claim records below the processing workspace.

Workflow Summary:

A claims team member opens the Command Center, reviews the Gauge and Chart, searches for a claim when required, checks the processing Board, uses the reminder action for missing documents, and reviews detailed records through the Report.

Documentation note: The supplied screenshots show the Page Builder configuration and the live Chart, Gauge, Board, and Report. A Viewer screenshot and separate Widgets/Form demonstrations were not included in the supplied screenshots, so they are not fabricated in this record.

5B — Screenshot Documentation 1

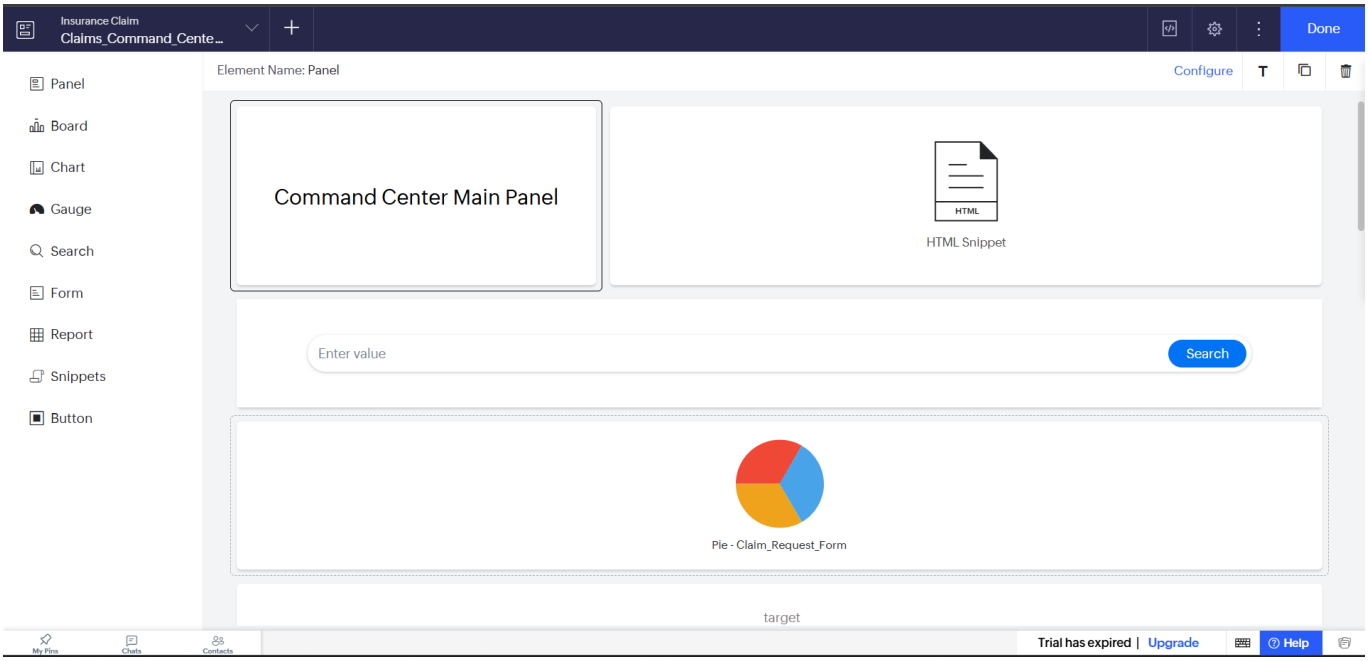

Fig. 5B.1: Claims Command Center Page Builder — Panel, HTML Snippet, Search and Chart

The Page Builder view shows the main panel, HTML/snippet area, Search element, and Chart element configured on the Command Center page.

5B — Screenshot Documentation 2

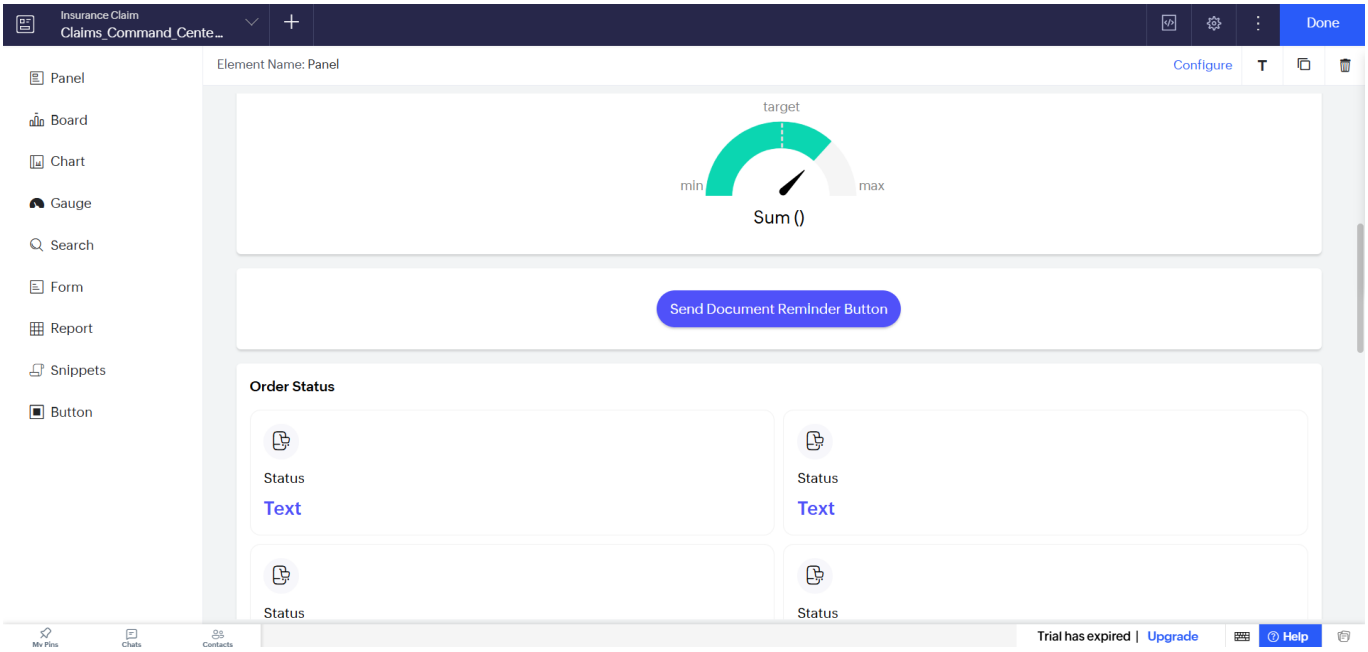

Fig. 5B.2: Page Builder — Gauge, Reminder Button and Claim Status Board

The Page Builder view shows the settlement Gauge, document reminder Button, and the configured status Board.

5B — Screenshot Documentation 3

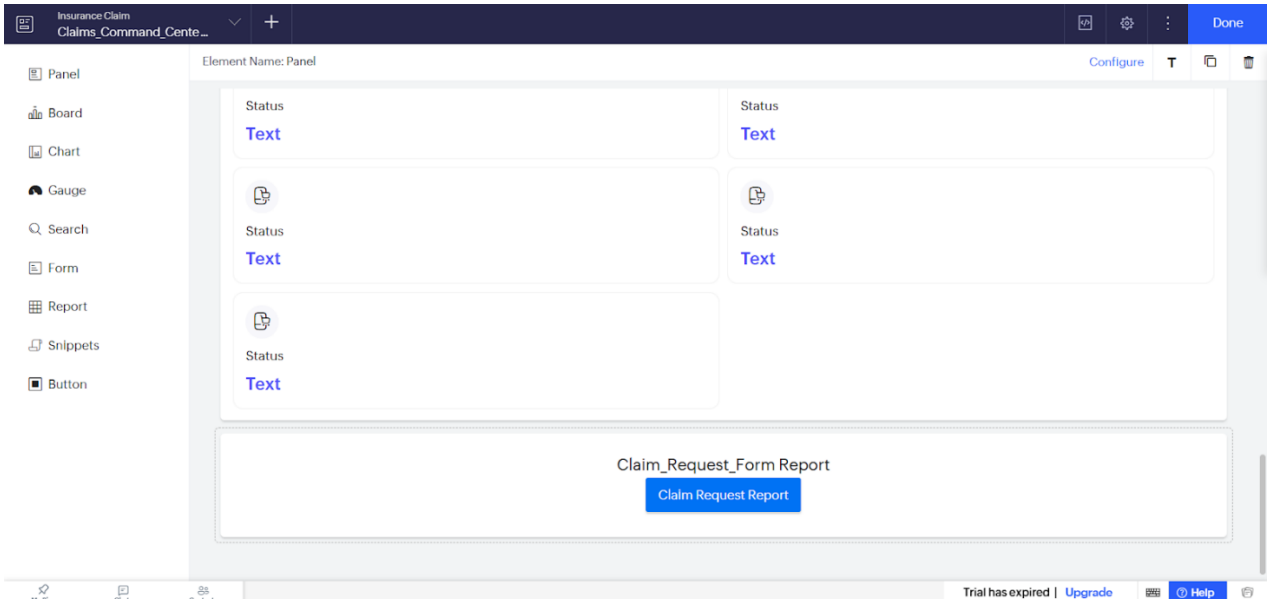

Fig. 5B.3: Page Builder — Claim Status Board and Full Claims Report

The lower part of the Page Builder shows the Board area and the Full Claims Report component.

5B — Screenshot Documentation 4

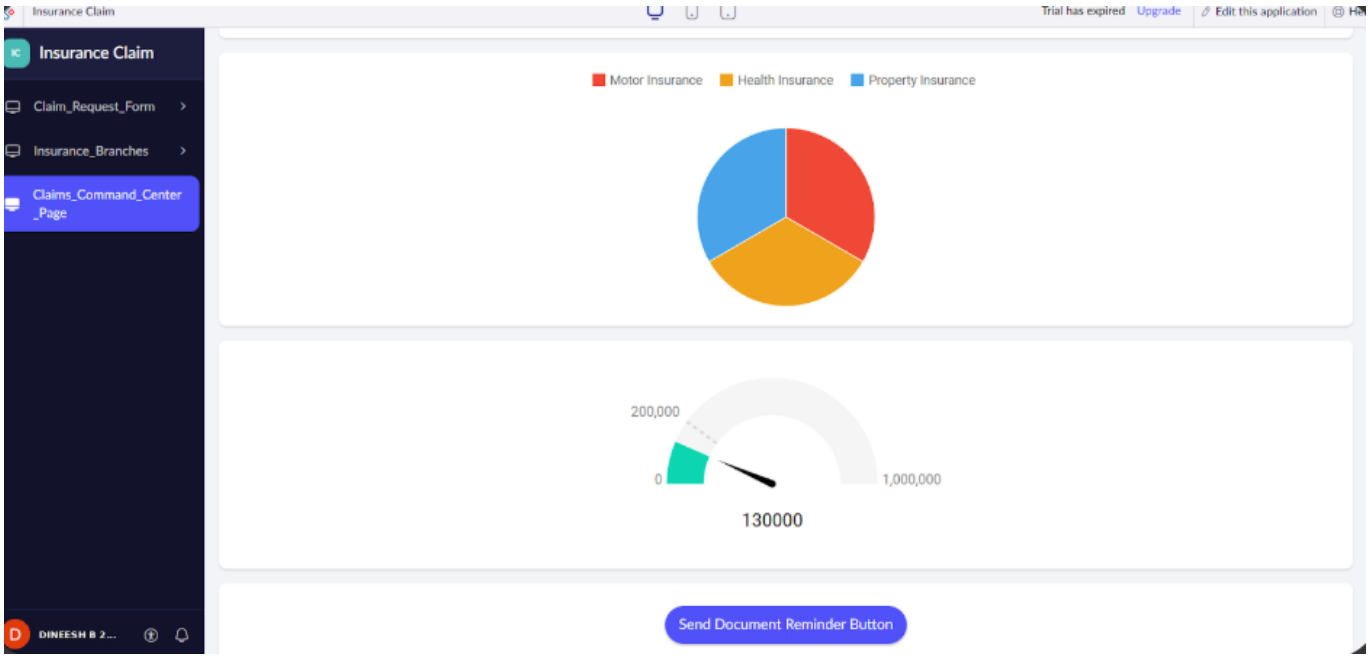

Fig. 5B.4: Live Command Center — Claim Type Distribution Chart and Settlement Gauge

The live page reflects sample data: the claim-type distribution is displayed as a pie chart and the Gauge displays a value of 130000 within the configured range.

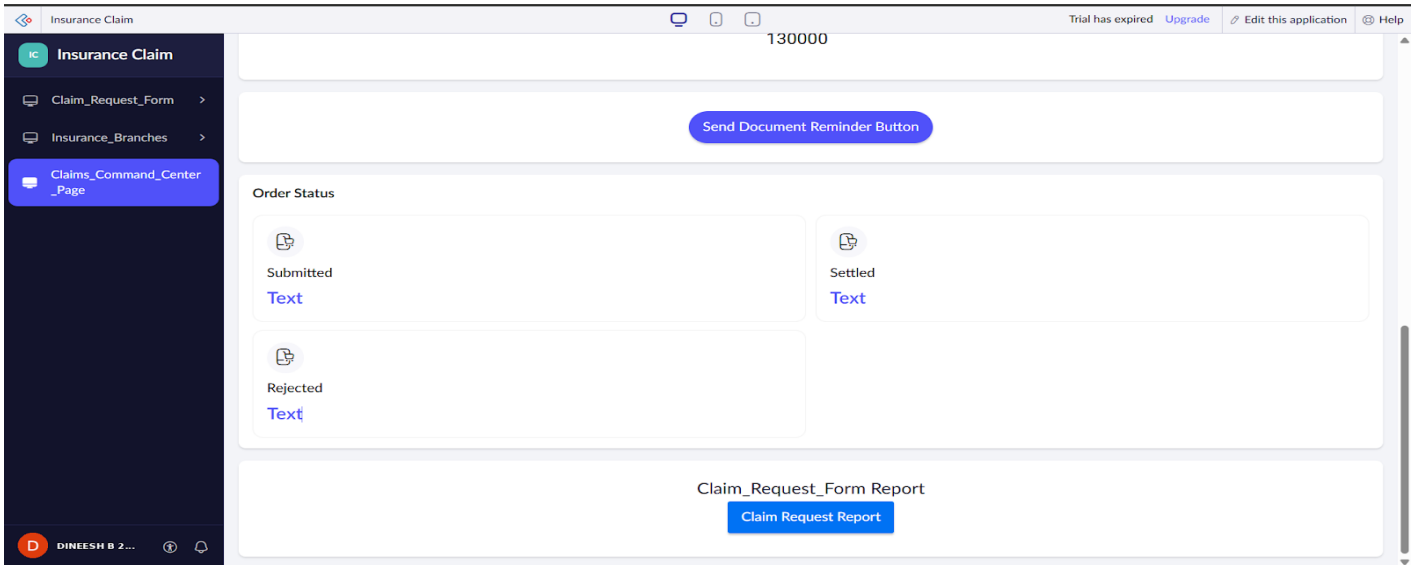

Fig. 5B.5: Live Command Center — Status Board and Claim Request Report

The live page shows the processing Board and the Claim Request Report. The supplied live screenshot does not demonstrate a drag-and-drop interaction.

Result

The Insurance Claim Command Center Page was successfully designed in Zoho Creator using the Page Builder. The supplied screenshots document the configured dashboard structure, Chart, Gauge, Button, Board, and Report, along with the live sample-data visualization.

The Command Center provides a unified workspace for monitoring claim distribution and settlement progress, accessing claim records, and supporting claims-processing activities.

Note: The assignment specifies a Viewer element, Widgets, and additional embedded components. Because the supplied screenshots do not show those elements in the final page, no unsupported screenshot or fabricated result has been added to this lab record.
